

[What's New] OpenShift Data Foundation 4.8 [Aug-2021]

Field Briefing

- ▶ Please direct your Q&A into the primetime forum.
- ▶ Any outstanding questions will be addressed at the end of the presentation or responses will be facilitated after the briefing.
- ▶ The slide deck, recording, and Q&A will be added to the google calendar invite and added to the [Data Services video channel](#) and our [Source page](#) after the call.
- ▶ Please take our poll + survey at the end of the session.

One Step Ahead

What's New from Products and Portfolio

What is this program?

"What's New from Products and Portfolio" is an internal Red Hat program that helps members of the Red Hat Sales and Services Organization stay one step ahead with the latest product and portfolio updates. It is a series of on-demand courses, live BlueJeans, videos and demos developed by product teams.

Target audience:

Red Hat Internal – The Sales and Services Organisation

Purpose:

To help sellers stay one step ahead with the latest on Red Hat's products and portfolio

Credits:

Take any On-Demand Course via Red Hat University (RHU) to get Continuing Education (CE) Credit

What's New in Red Hat OpenShift Data Foundation 4.8

August 2021

Marcel Hergaarden

Sr. Marketing manager

Red Hat Data Foundation business team

Unlock the value of data

DATA AT REST

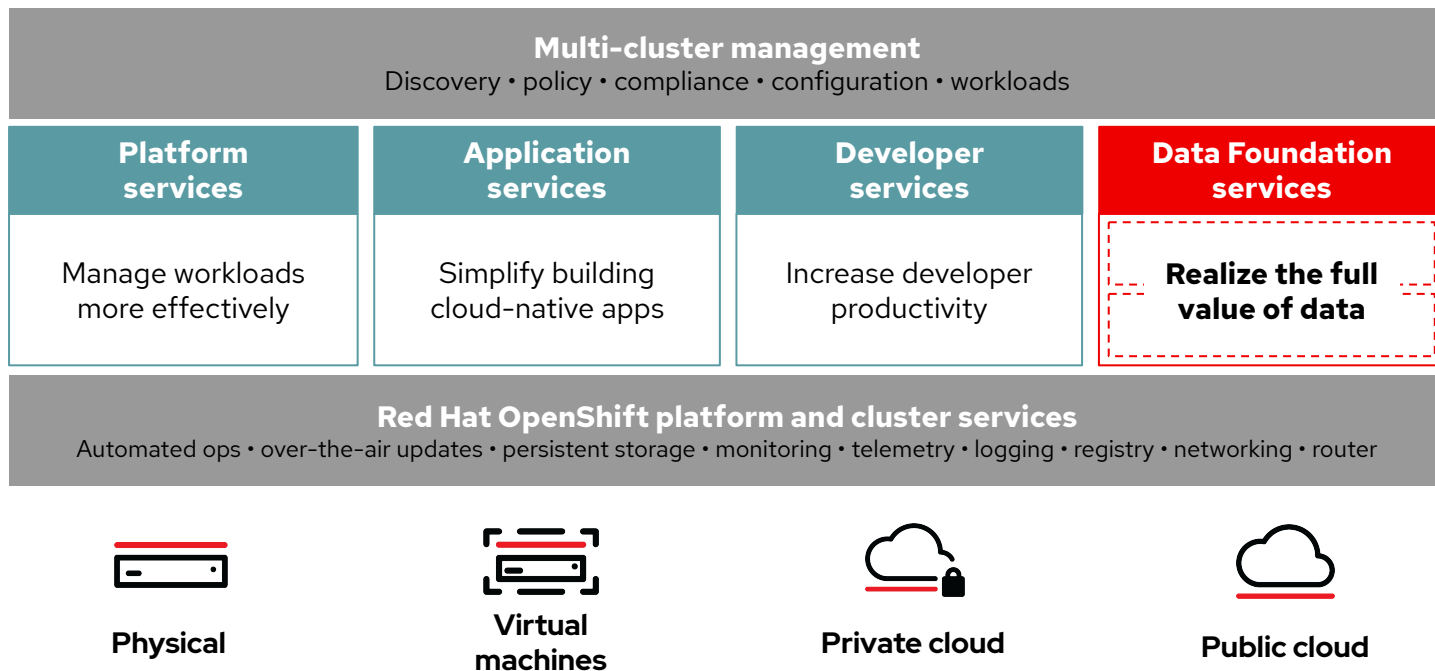

DATA IN MOTION

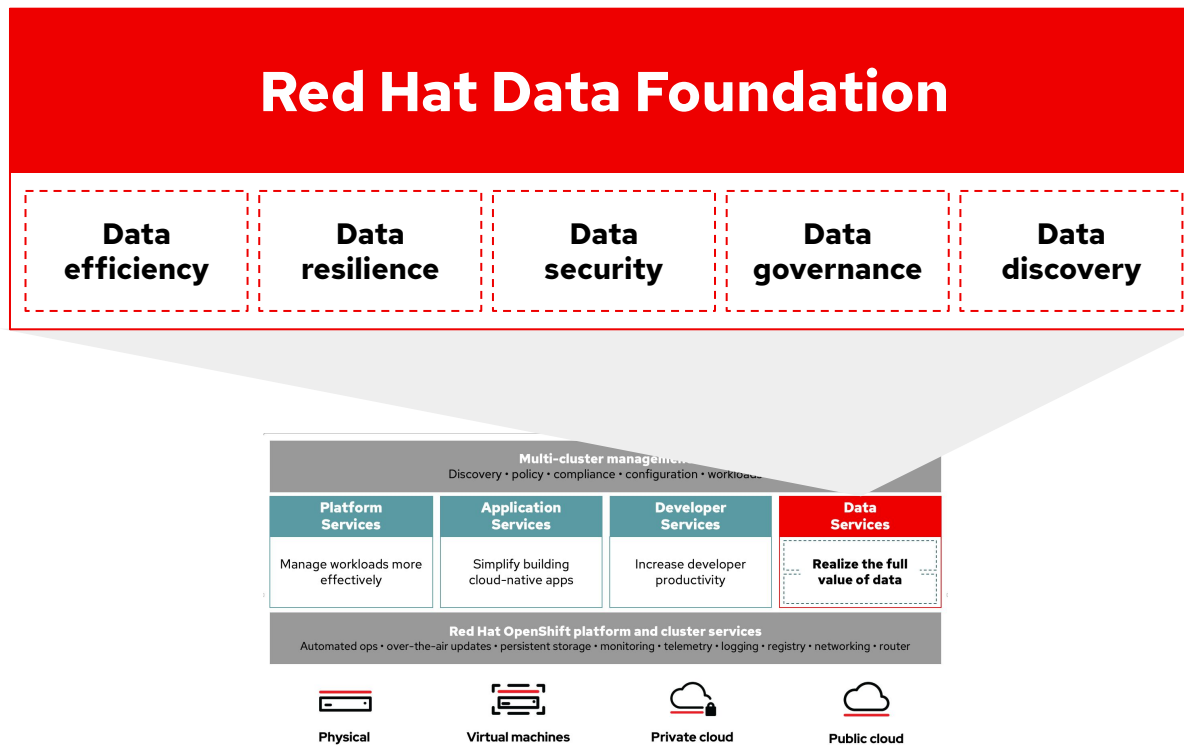

DATA IN ACTION

How Red Hat Data Foundation services fit

The Red Hat Data Foundation opportunity

Red Hat Data Foundation in a nutshell

Data efficiency

- Erasure coding
- Compression
- Performance

Data resilience

- Snapshots
- Clones
- Backup
- Recovery
- Business continuity
- Disaster recovery

Data security

- At rest encryption
- In flight encryption
- Key management

Data governance

- WORM
- Auditing
- Compliance
- SEC & FINRA
- GDPR

Data discovery

- Cataloging
- Tagging
- Search

Data Foundation: a change of mindset

Traditional, static approach

- Focus on improving efficiency
- Infrastructure-up view
- Poor performance at scale
- Disconnected
- Manual, monolithic and rigid

Dynamic, data foundation approach

- Focus on innovation
- Application-oriented view
- Highly scalable
- Always-on
- Automated, on-demand, and flexible

Simplified
access

Consistent
experience

Dynamic
scale

Red Hat Data Services
mission:

To make data
accessible to
applications across
the hybrid cloud,
unlocking its power
in new and
impactful ways

Delivering on the Red Hat
OpenShift promise:

Innovation without
limitation

Data is the most significant asset in today's businesses—give it data foundation

- Data foundation focuses on infrastructure and application needs so they can run and interact with ease and efficiency
- Provides a foundational data layer for applications to function and interact with data in a simplified, consistent and scalable manner
- Red Hat Ceph Storage is a foundational component to drive data services

What Data Foundation means for developers/data scientists

Traditional, static approach

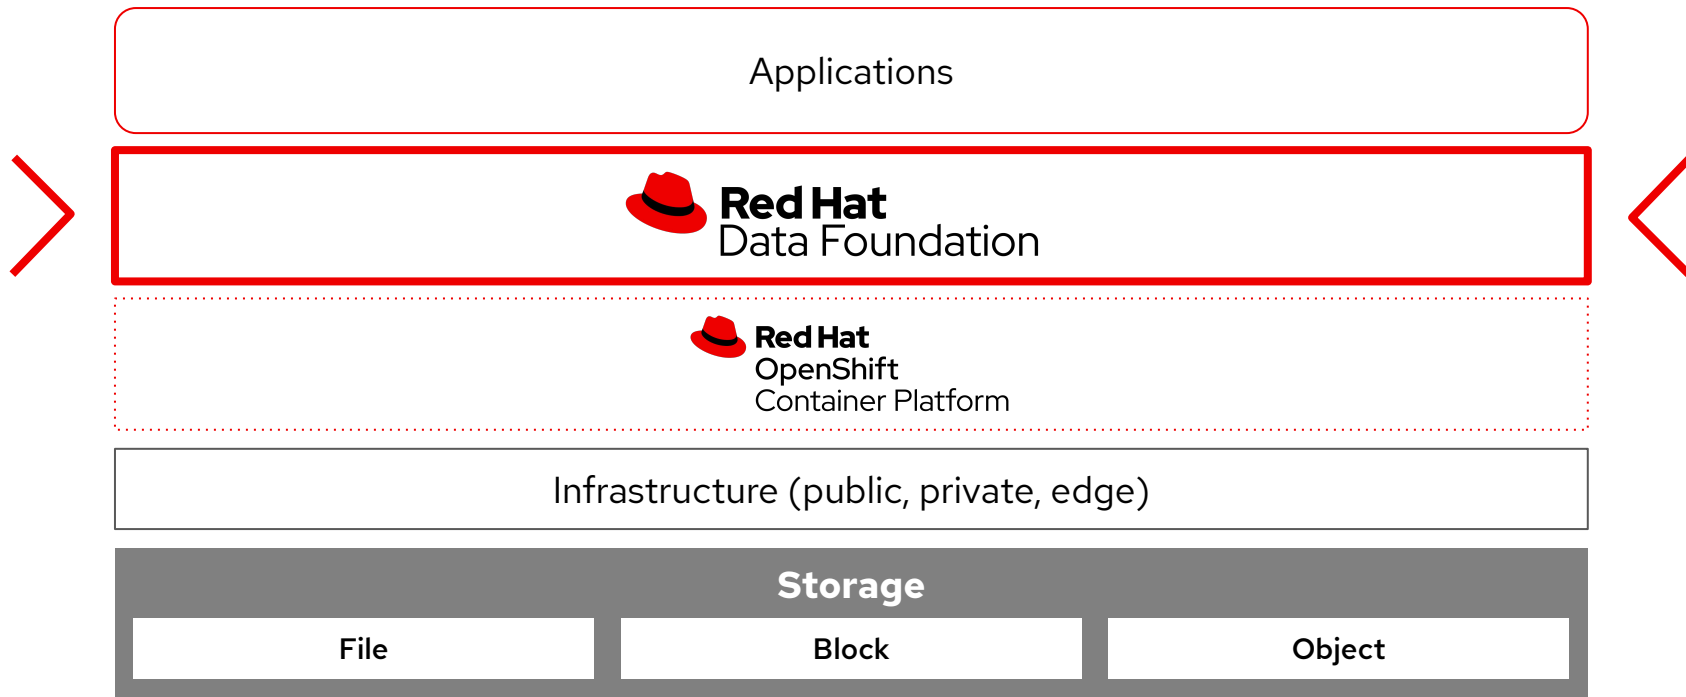

- Must visit the library, again and again
- Strictly limited usage, with limited content on offer
- Can only check out a few items at a time

Data foundation approach

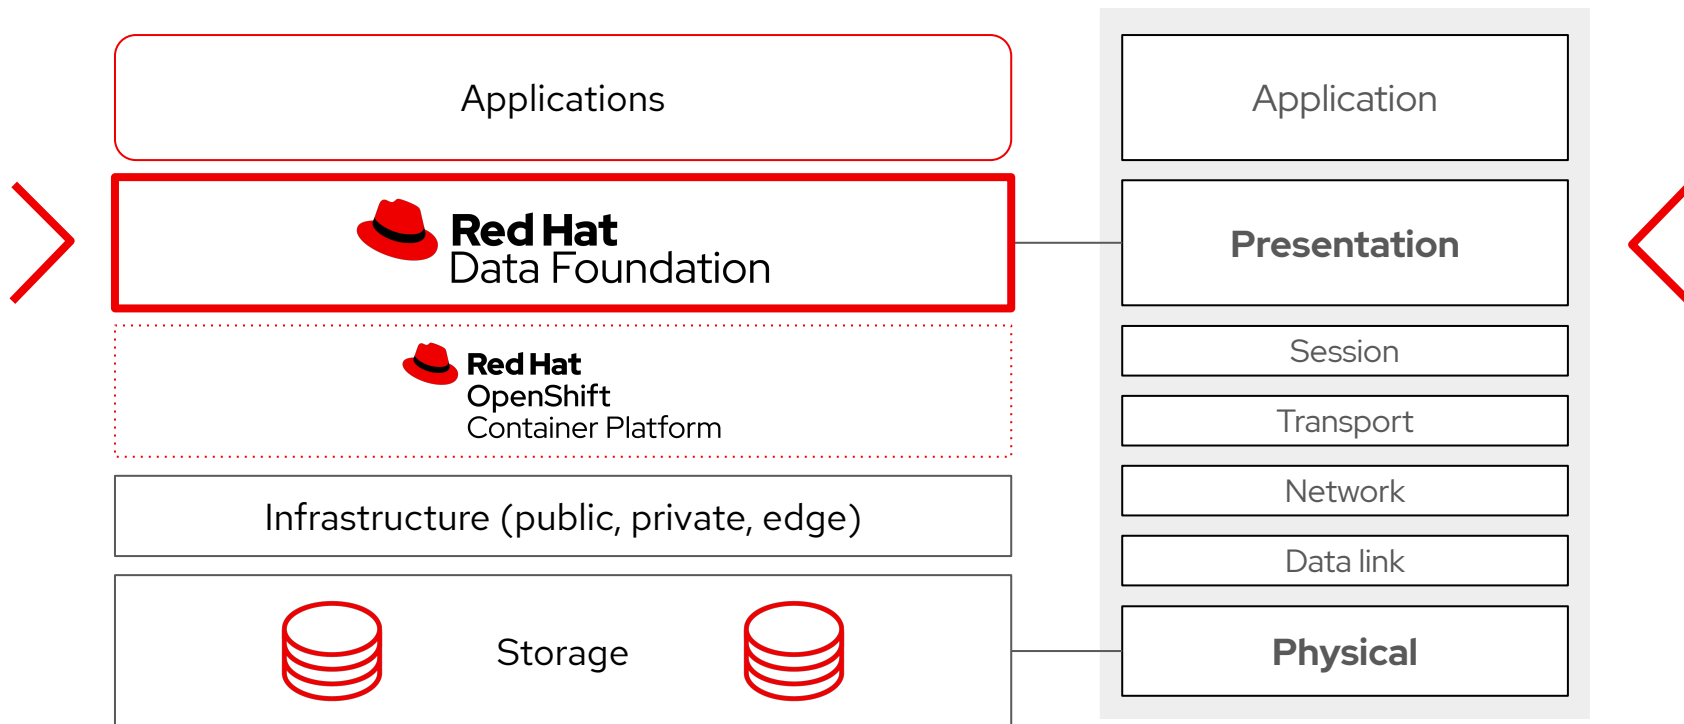

- Access to data from anywhere, indefinitely
- Simultaneous access to a wide range of content, and almost unlimited usage
- Self-service—no need for manual supervision

The Red Hat Data Foundation stack

Data foundation workloads

Workload specialized data foundation

For data at rest

Databases, warehouses and lakes

For data in motion

Streaming and messaging

For data in action

Data analytics, intelligence, AI/ML

Cloud-native infrastructure data foundation

For any stateful app

What's new?

Data resilience with Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

Greater control and manageability with about 10 new functional features

SECURITY

Enhanced protection with data encryption for RBD and additional protection with snapshotting and cloning

PERFORMANCE

Improved segregation of storage and network resources. Faster upgrade by component rescheduling improvement

EFFICIENCY

Extended flexibility by component selectability and new caching capabilities

Tech Preview

Provides early access to upcoming product innovations, enabling customers to test functionality and provide feedback during the development process.

These features are not fully supported under Red Hat Subscription Level Agreements, may not be functionally complete, and are not intended for production use.

As Red Hat considers making future iterations of Technology Preview features generally available, we will attempt to resolve any issues that customers experience when using these features.

About Dev preview

Dev Preview

Development Preview releases are meant for customers who are willing to evaluate new products or releases of products in an early stage of product development.

It's a vehicle for developers that provides early access to new unreleased features.

These features are not supported under Red Hat Subscription Level Agreements, may not be functionally complete, and are not intended for production use.

Dev preview features are also not documented in the official release documentation.

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

SECURITY

PERFORMANCE

EFFICIENCY

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

Compact mode

with Red Hat OpenShift Data Foundation

Run Red Hat OpenShift including OpenShift Data Foundation deployed on three nodes in production, without distinct compute or worker nodes and inclusive storage

What's new?

Red Hat OpenShift Data Foundation 4.8

Tech Preview

FUNCTIONALITY

Tech Preview

(last minute change)

Metro DR-stretch cluster

Stretched cluster with arbiter

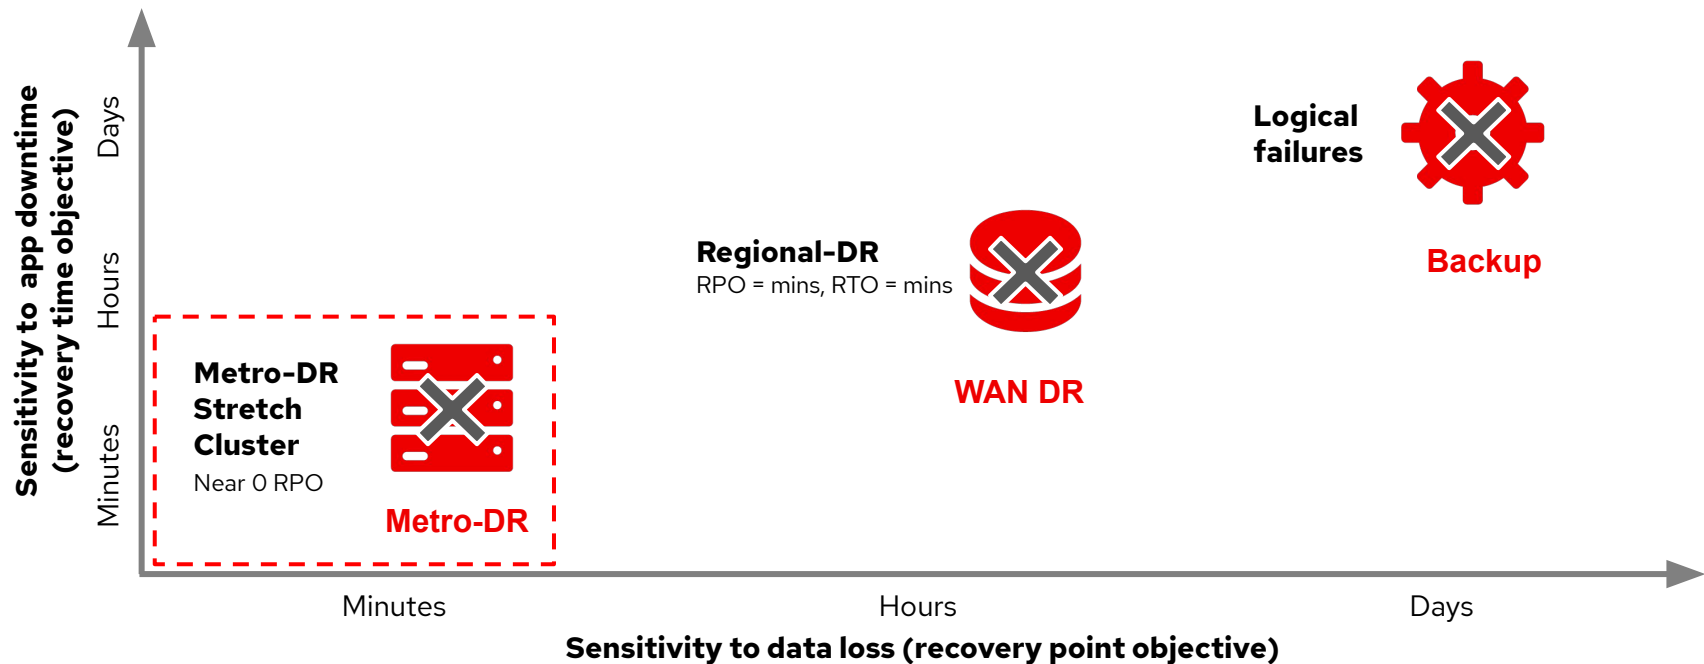

No data-loss recovery when only two data centers can be used. An arbiter will be used to get a valid quorum between the two data centers.

This concept enables for near-zero recovery point objective (RPO).

Recovery times vary, based on the volume type.

Metro-DR stretch cluster solution

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

FUNCTIONALITY

Capability for use with higher latency connections like WAN

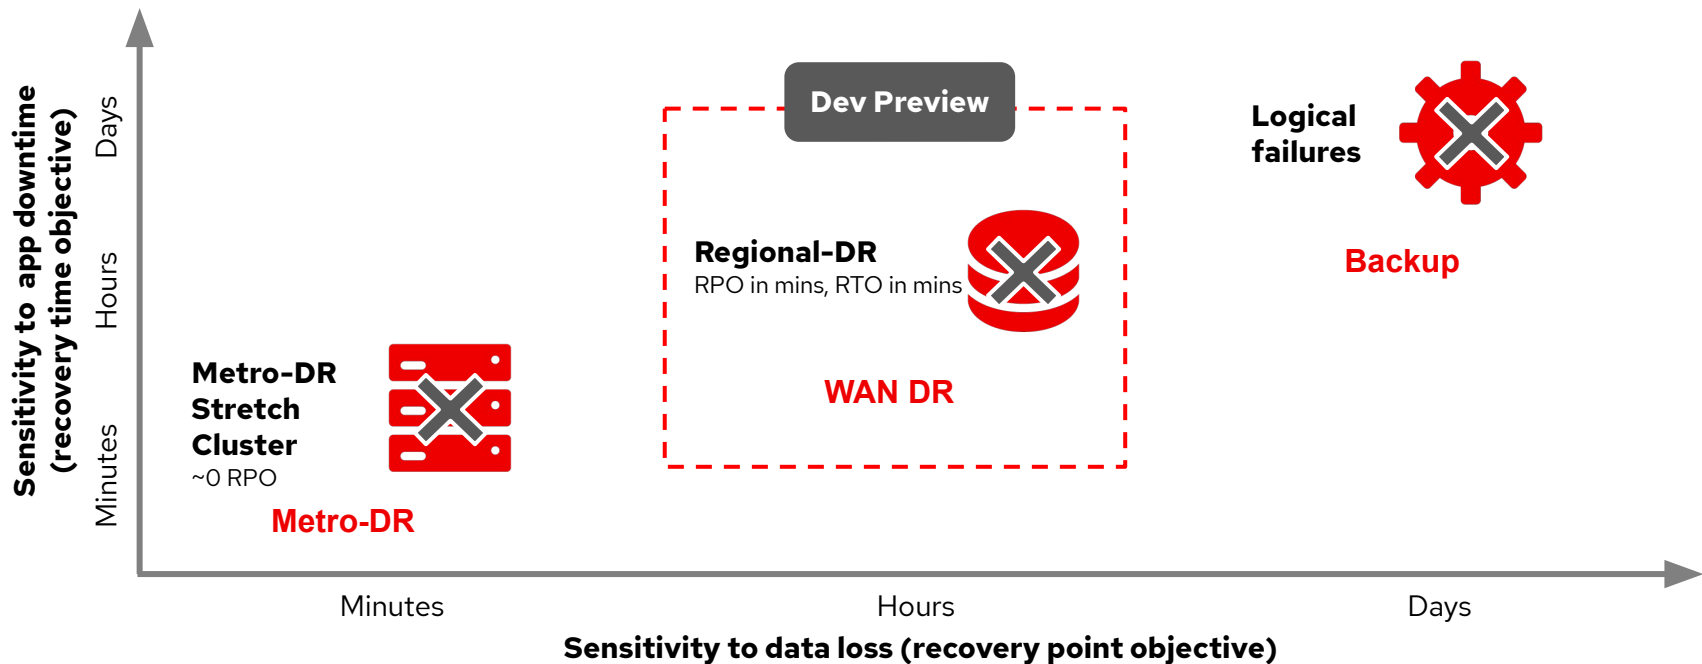

Regional DR

Multi cluster persistent block volume
async replication

Disaster recovery for persistent **block** volumes, using differential data for data transfer and time efficiency. Recovery point objective (RPO) and recovery time objective (RTO) times are in mins.

Regional-DR stretch cluster solution

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

FUNCTIONALITY

RADOS Block Device thick provisioning

Support for RBD thick provisioning

Thick provisioning with new storage class capability
Adding the ability to provision RBD PVC with thick provisioning.

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

FUNCTIONALITY

VMware thick provisioning

Support for VMware thick provisioning

This is about the backend storage for Object Storage Daemons
Thick-provisioned disks are considered the best for performance and security.

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

VMware Installer provisioned infrastructure

OpenShift Container Storage can now be installed and managed using VMware vSphere on installer-provisioned infrastructure.

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

FUNCTIONALITY

- CephFS
- RADOS block device

Replica-2

Two fold replication for the entire cluster

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

Pools management

An easy way to manage storage pools including, adding, editing and removal.

What's new?

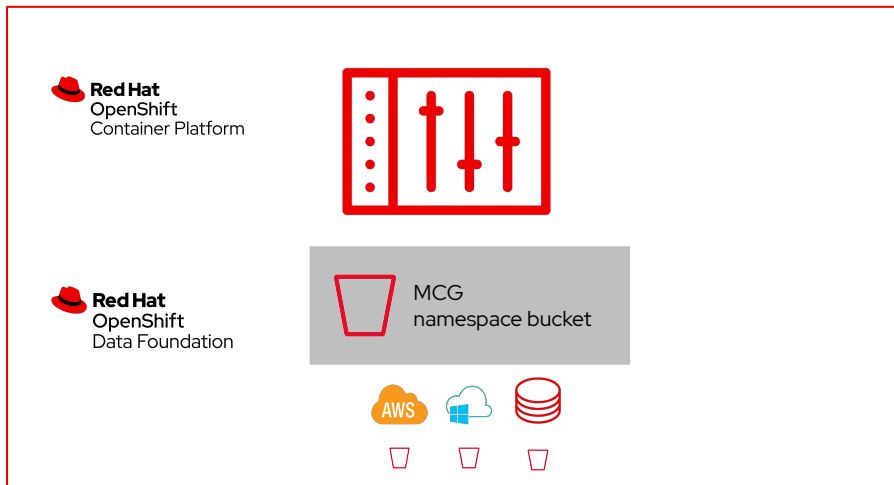

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

Multicloud Object Gateway

UI option for MCG Namespace bucket class and backing store

What's new?

Red Hat OpenShift Data Foundation 4.8

Tech Preview

FUNCTIONALITY

Object Storage Daemon—weight

Option to change the weight of an OSD

Allows for setting OSD weight, using the Ceph OSD crush reweight option

Ability to mechanically reduce the number of PGs it will host, avoiding saturation on a device that also serves other workloads

What's new?

Red Hat OpenShift Data Foundation 4.8

Tech Preview

FUNCTIONALITY

Multi Network Plugin–Multus

Provides network isolation by enabling data plane and control plane separation

Ability to improve security and performance by isolating networks.

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

Recovery with a few commands

Supportability—recover from a full cluster failure event

Provides a way to recover quickly

Red Hat provides a job template containing simple instructions to help customers recover quickly

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

SECURITY

PERFORMANCE

EFFICIENCY

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

PERFORMANCE

Enables for both security and resource fencing

Restricting workload access to specific physical disk device groups

Data segregation

Data segregation per group of hosts

Provides a way to isolate I/O between workloads using a specific node or nodes group and storageclass per workload

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

SECURITY

PERFORMANCE

EFFICIENCY

What's new?

Red Hat OpenShift Data Foundation 4.8

SECURITY

OpenShift Data Foundation 4.7

capability to encrypt PVs

Enhanced Block Device persistent volume encryption

Enhanced RBD PV encryption

What's new?

Red Hat OpenShift Data Foundation 4.8

SECURITY

OpenShift Data Foundation 4.7

capability to encrypt PVs

OpenShift Data Foundation 4.8

supports encrypted snapshots and clones

Enhanced Block Device persistent volume encryption

Enhanced RBD PV encryption with the ability to clone the volume and take a snapshot

What's new?

Red Hat OpenShift Data Foundation 4.8

FUNCTIONALITY

SECURITY

PERFORMANCE

EFFICIENCY

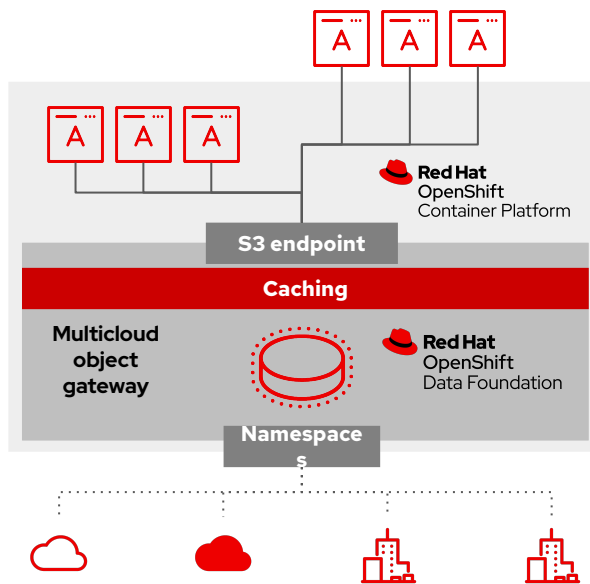

What's new?

Red Hat OpenShift Data Foundation 4.8

EFFICIENCY

Multicloud object gateway (MCG)

Caching support

A caching object solution for customers where data gravity is required. This is particularly useful for those using artificial intelligence/machine learning (AI/ML) platforms.

What's new?

Red Hat OpenShift Data Foundation 4.8

Dev Preview

EFFICIENCY

Flexibility in components deployment
More flexibility in deployment,
choice for components to become installed.

Lowering resources allocation
and subscription cost tied to
required resources

Block only

What's new?

Red Hat OpenShift Data Foundation 4.8

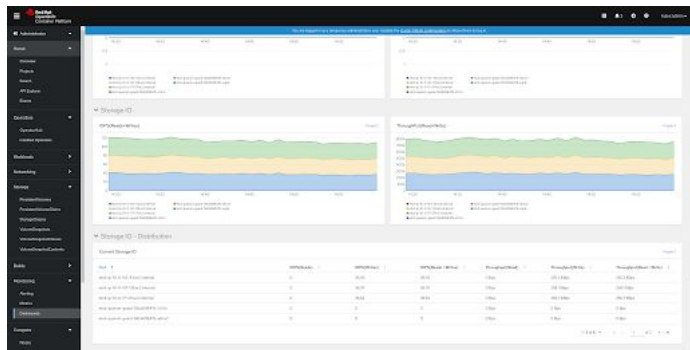

EFFICIENCY

TOP utility—viewing pods I/O metrics

Ability to drill down when there is a load or overload situation on a system

Pods level performance information helps finding "noisy" applications

What's new?

Red Hat OpenShift Data Foundation 4.8

SUMMARY

General Available ✓

- Compact Mode (for Edge)
- VMWare IPI provisioning
- Block encryption extended with snap and clone
- Easy pools management
- Multicloud object gateway User Interface option (new) and caching feature (TP in 4.7)
- Supportability—recover from a full cluster failure event
- TOP IO metrics for pods

Tech Preview

- Metro-DR stretch cluster
- Multi Network Plugin (Multus)
- Object Storage Daemon Weight option

Dev Preview

- Block Device thick provisioning
- Regional-DR (for RBD)
- VMware thick storageclass
- Replica-2 for the entire cluster (RBD and CephFS)
- Data segregation
- Flexible component deployment

What's new?

Red Hat OpenShift Data Foundation 4.8

SPECIAL THANKS

To

- Product management team
- Engineering team / QA team
- BU slidedeck review team
- Technical marketing team
- Product marketing team
- Technical enablement team
- All contributors who made this happen

Recording

Find the recording, slides, and Q&A document uploaded to the **google calendar invite** after the session ends.

All assets will also be available via the [Data Services](#) video channel. [Subscribe now](#) to receive updates on new video enablement.

Take our poll!

Now LIVE in Primetime.

Open Ended Feedback?
